SUMMARY

Adrian Indrea and Anamaria Indrea – About a class of linear and positive Stancu-type operators .................................................. 1

N. Belkhir, A. Rabhi, S. Soltani – Strong consistency rates and asymptotic normality of conditional hazard function for functional data ................................. 9

A. H. Arnous – Solitary wave solutions of space-time FDEs using the generalized Kudryashov method ........................................... 41

B. Daraby, F. Rostampour and A. Rahimi – Hardy’s type inequality for pseudo-integrals ................................................................. 53

D. Lupsa, V. Niculescu, R. Lupsa – Collections as Combinations of Features 67

R. Bucur, D. Breaz and L. Georgescu – Third Hankel determinant for a class of analytic functions with respect to symmetric points ......................... 79

F. Merovci, I. Elbatal, L. Puka – The McDonald Quasi Lindley Distribution and its applications ........................................................... 87

I.D. Chipchakov – Henselian valued quasilocal fields with totally indivisible value groups ........................................................................ 107

A. Ebadian, S. Zolfaghari, S. Ostadbashi – Higher *-derivations in non-Archimedean random C*-algebras and Lie higher *-derivations in non-Archimedean random Lie C*-algebras ......................................................... 127

J. Manafian and M. Lakestani – Application of the (G'/G)-expansion method for the nonlinear Drinfeld-Sokolov and generalized Drinfeld-Sokolov equations ....... 141

H. E. Ozkan Uccar, M. Aydogan, Y. Polatoglu – Some New Distortion Theorems for Starlike Harmonic Functions of Order Alpha ........................................... 171

Saad Ihsan Butt, Khurram Ali Khan, Josip Pecaric – Generalization of Popoviciu Inequality for higher order convex functions via Taylor polynomial .................. 181

V.T. Phan – Minimizing polynomials on compact sets ..................................... 201
