ACCEPTANCE OF THE THESIS PROJECT

Before the end of the first year of enrolment for the doctorate, students who have been admitted to the research period must submit their thesis project and apply for it to be accepted. Applications shall be made in the period established in the yearly calendar. If the student has been assigned bridging courses, these must be passed before the student’s thesis project can be admitted.

The admission process is carried out as follows. Students must fill in the corresponding form. Students should attach academic certificates stating that they have passed any additional training courses, when applicable. A copy of the commitment document that has been signed by the supervisor or co-supervisors of the thesis should also be attached. The project must be approved by the supervisor or co-supervisors of the thesis. Applications shall be submitted to the UB’s general registry office.

Once the application for admission of the thesis project has been submitted, the Doctoral Program Committee will assign each student to a Monitoring Committee. The Monitoring Committee will make a reasoned decision about the thesis project and will inform the Doctoral Program Committee of this decision. The Doctoral Program Committee will then inform the doctoral student, the thesis supervisor or co-supervisors, the tutor, if there is one, and the Secretary’s Office for Students and Teaching Staff at the Faculty of Mathematics so that the thesis project can be registered, if it has been accepted.

If the Monitoring Committee rejects the thesis project, the student can reapply for the doctoral program. However, the Doctoral Program Committee can decide to give the student the opportunity to resubmit a doctoral thesis project in the next period of applications for the admission of doctoral theses.

The decisions will be posted on the doctoral program’s web page.
