Recognition of qualifications

Those applicants already holding academic qualifications awarded in official postgraduate programs of study such as the Spanish Diploma of Advanced Studies (DEA) or a Master's degree may apply for formal recognition of their studies, for a maximum of 30 credits for subjects that did not constitute train-up units or modules. Applications should be made at the Secretary's Office at the Faculty of Mathematics, and should be accompanied by the duly completed application form for recognition of qualifications, listing the subjects successfully completed in the applicant's previous course of studies and accompanying this with an academic certificate and the description of the official programs of the subjects. The Coordination Committee will then propose which of the applicant's credits can be recognized and will issue a document of accreditation which must be ratified by the Course Coordinator, and which must be presented by the applicant when registering for the Master's degree.
